

Discover the Secrets of the Brain through the Interactive BRAINN Platform Games

How's your memory? How do you feel today? The project BRAINN – Brain Research and Integrative Neuroscience Network for COVID-19 (funded by the EU's Horizon Europe framework, No. 101079001) announces the official release of its groundbreaking research platform, inviting adults to participate and uncover the secrets of the brain through enjoyable games. This platform not only offers a learning and entertainment opportunity but is also a significant tool for understanding the impact of long-term COVID-19 on the brain and mental health.

Details about the platform and your participation:

The platform includes interactive games exploring cognitive functions and brief questionnaires about mental health. The goal is a better understanding of the brain and the effects of long-term COVID. Upon completing the research, participants can receive their performance results. The program has approval from the National Bioethics Committee of Cyprus (EEBK/ΕΠ/2023/40).

Participation: If you are over 18, whether you have had COVID-19 or not, you can participate in data collection using the link below.

Time: Approximately 75 minutes, which can be split into two phases based on your schedule.

Participation Link: <https://redcap.link/BRAINN> or scan the QR code below to join!

Get to know your brain by contributing to science and the significant epidemiological study on long-term COVID-19 in Cyprus!
