How to introduce a new genre into Roman literature

Περίληψη διάλεξης:

Introducing a new genre can be a risky undertaking, especially when the discourse on art resp. literature is as conservative and exempla-focused as it was in early imperial times. When Statius decided to publish the *Silvae*, a collection of at least some of his occasional poems which under normal circumstances should not have been meant to survive their date of expiry by any other reason than by chance, he was well aware of the criticism he would meet. It is of some interest to observe how Statius, who had already positioned himself as a new Virgil by publishing the *Thebais*, now turned to Horace as a classical model of a poet, who for his part had introduced a new genre as well, and how he adapted some poetological concepts Horace had made use of into a solid foundation for his new way of writing.
