| Level                         | Undergraduate  |                 |           |                     |   |
| Year / Semester               | 4 <sup>th</sup> year / 7 <sup>th</sup> or 8 <sup>th</sup> Semester   |                 |           |                     |   |
| Teacher's Name                | Ioannis Giapintzakis   |                 |           |                     |   |
| ECTS                          | 7  | Lectures / week | 3+1 hours | Laboratories / week | 0 |
| Course Purpose and Objectives | The main objective of the course is to familiarize the students with materials and technologies for production, conversion, storage, transport and use of energy, as well as capturing and storing pollutants such as CO <sub>2</sub> .  |                 |           |                     |   |
| Learning Outcomes             | <ul style="list-style-type: none"> <li>• Identify and discuss materials and technologies for energy production</li> <li>• Identify and discuss materials and technologies for energy storage</li> <li>• Identify and discuss materials and technologies for energy transport</li> <li>• Identify and discuss materials and technologies for energy conversion</li> <li>• Identify and discuss materials and technologies for CO<sub>2</sub> capture and storage</li> <li>• Describe the operation mechanism of different types of solar cells, fuel cells and batteries</li> <li>• Identify material properties critical for designing such devices</li> </ul> |                 |           |                     |   |
| Prerequisites                 | MME 255  | Required        | None      |                     |   |
| Course Content                | The course addresses questions such as: How will we meet rising energy demands? What are our options? Are there viable long-term solutions for the future? In addition, the course introduces the students to the fundamental materials science at the heart of: Renewable energy sources, Nonrenewable energy sources, Future transportation systems, Energy efficiency, Energy storage and, CO <sub>2</sub> capture and storage.   |                 |           |                     |   |
| Teaching Methodology          | <ul style="list-style-type: none"> <li>• Lectures</li> <li>• Tutorials, homework problems</li> <li>• Presentations by students of group projects (on topics of materials and technologies related to the course), written report.</li> <li>• Communicative, Collaborative</li> <li>• During the first week of the semester, the course syllabus is given to students, which includes information on the course content, expected learning outcomes, assessment and office hours.</li> </ul>  |                 |           |                     |   |
| Bibliography                  | <ul style="list-style-type: none"> <li>• <i>Fundamentals of Materials for Energy and Environmental Sustainability</i>, edited by D. Ginley and D. Cahen. Materials Research Society &amp; Cambridge University Press.</li> </ul>   |                 |           |                     |   |

|            |   |
|------------|---|
| Assessment | <ul style="list-style-type: none"><li>• Written report 25%</li><li>• Project presentation 15%</li><li>• Midterm Exam 20%</li><li>• Final Exam 40%</li></ul> |
